

What Makes The Le Soleil Mattress Different?

Le Soleil not only offers contoured support at a fantastic price, but it also provides peace mind with our 120 nights risk-free sleep trial and 10 Year Warranty. Plus, every **Le Soleil** mattress is shipped fast to your front door. And if it's not a perfect fit, we'll refund your purchase and work with you to get the mattress donated or recycled. No hard feelings.

What Are Le Soleil Mattresses' Highlights?

Above-average firmness for a foam bed provides even balance of support and contouring.

Gel-infused memory foam has top-notch pressure relief.

The feel of the **Le Soleil** mattress strikes a balance that is extremely compelling for couples, all at a competitive price-point. Its thick comfort system with memory foam provides motion isolation without sagging or sinking into the bed.

Motion isolation and pressure relief are strengths of the **Le Soleil**. On the **Le Soleil** mattress, you can switch sleeping positions without waking your partner. The foam layers absorb movement where it occurs rather than allowing it to transfer across the bed. Its top layer is composed of cooling gel memory foam that deeply contours to the body to help alleviate pain in pressure-prone areas. Next is a transitional layer of high-density poly-foam that reduces sagging and evenly distributes weight. The support core is also constructed from high-density polyfoam. This layer limits sinkage in the midsection to promote spinal alignment. A no-slip base ensures that your mattress stays put.

The **Le Soleil** has a medium firm (6.5) feel, offering cushioning without the sense of sleeping "in" the mattress. This firmness level has broad appeal but is especially well-suited for side sleepers. The more moderate contouring means the mattress retains less heat and poses fewer barriers to sexual activity than traditional memory foam.

How Firm Is The Le Soleil Mattress?

Le Soleil is medium firm and highly supportive. We'd rate the **Le Soleil** at a 6.5 on a 1-10 scale if 1 is a feather pillow and 10 is a cement floor. **Le Soleil** is designed for perfect long-term support with true top layer comfort.

What Our Testers Thought?

The **Le Soleil** may be the solution for couples who want the pressure relief of a memory foam mattress without too much overheating or sinkage during sex. This is a true medium firm model.

Furthermore, **Le Soleil** is a great pick for couples who wake each other up. Virtually no movement is transferred across the mattress' surface, thanks to its thick foam layers.

What Is The Le Soleil Cooling Gel Memory Foam Layer?

Le Soleil cooling gel memory foam mattresses combine a layer of memory foam with comfortable and base support foams. Cooling gel memory foam is a specially formulated memory foam that contains gel beads designed to help absorb heat and draw it away from the sleeper. Additionally, the cellular structure of the memory foam itself is optimized for increased airflow over traditional formulations. Memory foam uses your body heat to soften and mould to your shape. This provides remarkable support and comfort. Once pressure is removed, memory foam will bounce back very slowly and over time will remember your body shape and optimal sleeping position, hence the name 'memory'.

What Does Pressure Relief Foam Do?

Pressure relieving base foam eliminates pressure points so that you wake up with fewer aches and pains. The foam conforms to your body so your bones and joints sink into softness.

What Is The 90 Night Sleep Trial?

One of the incredible things about all of our mattresses is that each of them comes with 120 days trial period. This means that you'll have 4 months from the day your mattress is delivered to see if the **Le Soleil** is right for you. We encourage you to take the first 4 months to get to know your new mattress, as it can take this long for your body to adjust to the support and comfort of the **Le Soleil**. Should you find it's not a perfect fit, some photographic evidence may be required to process your return.

What Is The Best Kind Of Base For My New Mattress?

Our mattresses are low maintenance. A box spring, platform bed frame, slatted base, bunkie board, or adjustable bed frame would work just fine! For extra support, we recommend a flat surface.

Can I Clean Or Wash Le Soleil's Cover?

Zippered cover with zip secures the mattress from 360 degrees; it protects the mattress. Machine washable; tumble dry for easy maintenance.

Besides for spills and light accidents, we recommend spot cleaning the cover as soon as the spill or stain occurs with a damp cloth and mild detergent or hand soap taking care not to let liquid reach the underlying foam layers. For bigger or deeper set stains, an upholstery or spot cleaner or cleaning device would work well but we do not recommend removing the mattress cover entirely as the underlying foam mattress layers may get damaged in the process. If you do remove the cover, we strongly advise against moving the mattress, adding any liquids or other environmental substances to it or in any way disturbing the foam layers if the cover is off.

Keeping the cover intact will help protect the integrity of the mattress so that you may enjoy amazing sleep for years to come. For an easier method of keeping your mattress clean we strongly advise the use of a stain and water-resistant mattress protector (such as the ones we have available for purchase on our site) which may be removed and laundered from time to time and will keep your Le Soleil mattress in tip top condition!

Le Soleil Mattress Unboxing And Off-Gassing

The **Le Soleil** is a bed-in-a-box mattress, so it will ship compressed in a box to your door. It has an off-gassing period in which it will release gasses trapped during compression. We'd recommend waiting at least 24 hours for this mattress to decompress before sleeping on it.

How Long Does A Memory Foam Mattress Take To Expand?

Please allow 24-72 hours for your Mattress to regain its full shape. Any memory foam will expand faster in a warmer room. In cold temperature, at delivery, your mattress may take a bit longer to return to full sized from its compressed state. The expansion time of the mattress will vary as per the surrounding.

4 Tips To Help Your Mattress Decompress

Thanks to our carefully developed compression packing technology, we're able to flatten, roll and pack your mattress into a single, wonder-filled box that can sustain its long journey to your door. And we understand that waiting 48 - 72 hours for your mattress to puff back up to its original shape can make a person feel, well, restless. Fortunately, after many years of perfecting our craft, we have a couple of tricks up our sleeve to help mattress decompression happen a little faster.

- 1** **Open The Box Within 72 Hours:** Once your mattress in a box arrives at your doorstep, it's out of its element, and subject to a new climate and atmosphere. Because of this, we strongly encourage you to open it within 72 hours of receipt. Leaving it cooped up much longer than that could result in extended recovery time, so do yourself and your new investment a favor, and break into that box as soon as you're able.
- 2** **Get Moving:** Once removed from its packaging, help air flow through your mattress by rolling or walking on it. Sleeping on your mattress the first night is also encouraged, especially if you like to practice karate moves during your REM cycle. Remember, your mattress has been vacuum-packed prior to reaching you, so a bit of movement will encourage tiny air pockets to open up and expand.
- 3** **Keep It Hot:** You may recall this one from your high school science classes. By keeping the room at 70 degrees or warmer, mattress molecules are encouraged to move around and undergo thermal expansion. If you enjoy a cooler home or live in a colder climate, secluding a space heater to the bedroom (at a safe distance from your mattress of course) can be helpful.
- 4** **Use Steam:** Steam works wonders on helping edges and corners recover. Similar to the concept of warming up the entire room, using a steamer to concentrate heat over certain areas can encourage your mattress to complete its growth spurt.
